Ideation Phase

Brainstorm & Idea Prioritization Template

Project Description:

This project aims to create a system to collect leftover food from hotels, restaurants, and events and distribute it to poor and needy people. The goal is to reduce food waste while fighting hunger. Through effective coordination and partnerships with NGOs, volunteers, and local organizations, the system ensures that excess food reaches people in need safely and efficiently.

Workflow:

1. Partner with restaurants and event organizers for leftover food collection.
2. Create a mobile application for donors to register and report available food.
3. Notify volunteers and NGOs about nearby collection points.
4. Ensure food safety checks before distribution.
5. Deliver food to homeless shelters, orphanages, and poor communities.

Step 1: Team Gathering, Collaboration, and Problem Selection:

Problem: Huge quantities of leftover food are wasted daily while many people sleep hungry.

Discussion: The team decided to develop a system to collect and distribute surplus food safely.

Ideas: Build a digital platform to connect food donors, NGOs, and volunteers efficiently.

Solutions: Develop an app to track food donations, volunteers, and delivery logistics.
